1. Now we will prompt the user to enter a name for the newly created clicker.
2. Modify the Clicker state object to keep track of a name in addition to the click count.
3. Create a new view representing the name prompt and display it to the user when the Add button is clicked.
4. Use a delegate to add a new Clicker.

Bonus:

Sort the clicker objects based on the name or click count. Use the UISegmentedControl to alter between the two sort criteria and place it on the navigation item. Hint: look at the available sorting functions in NSMutableArray.
